

GOOGLE ADSENSE

Policy Audit Report

epicgameshub.com

Prepared: June 15, 2026

Confidential – For Internal Use Only

Report For	epicgameshub.com
Report Date	June 15, 2026
Audit Type	Google AdSense Approval Readiness
Current Status	REJECTED – Low Value Content
Overall Risk Level	HIGH

1. Executive Summary

This report provides a comprehensive audit of **epicgameshub.com** against Google AdSense Program Policies. The site was reviewed across all key areas including content quality, technical compliance, legal requirements, and user experience. The audit was triggered by a rejection citing '**Low Value Content**' — one of Google's most common reasons for denying AdSense applications on gaming aggregator sites.

The site has a solid structural foundation — legal pages, navigation, mobile responsiveness — but lacks the original, substantive content that Google requires to approve monetisation. This report outlines every issue found, explains why it matters, and provides clear action steps to resolve each one.

Category	Score	Status
Content Quality & Originality	3 / 10	CRITICAL
Technical & SEO	6 / 10	MODERATE
Legal Pages	8 / 10	GOOD
User Experience	7 / 10	GOOD
Social & Trust Signals	2 / 10	CRITICAL
About Us Credibility	3 / 10	POOR
Overall AdSense Readiness	4 / 10	NOT READY

2. Critical Issues (Must Fix First)

2.1 Thin / Low Value Content on Game Pages

CRITICAL

Issue: Every game page (e.g. Subway Surfers Vegas Queen) shows an embedded iframe as the primary content. The written text is very short — typically 3–5 short paragraphs. Google's algorithm classifies pages where the main content is a third-party embed with minimal original writing as 'thin content'. This is the primary reason for your rejection.

How to Fix: Write a minimum of 500–800 original words per game page. Include: a detailed game description, full how-to-play guide, tips and tricks section, pros and cons, and a rating/review from your team. The content must be written by you, not copied from the game developer's site.

2.2 No Blog or Article Section

CRITICAL

Issue: The site has zero blog posts, news articles, or editorial content. Google rewards sites that produce regular original content. A gaming site with only game iframes and no editorial voice is seen as an aggregator, not a content publisher — and aggregators rarely pass AdSense review.

How to Fix: Create a dedicated Blog section with at least 15–20 articles before reapplying. Topics should include: gaming news, top 10 game lists, beginner guides, game comparisons, updates and reviews. Articles should be 800–1200 words each, written in your own voice.

2.3 Broken Social Media Links

CRITICAL

Issue: The footer contains social media icons (likely Facebook, Instagram, Twitter/X) but all links point to '#' — a placeholder meaning they go nowhere. Google uses social presence as a trust signal. Dead links also damage user experience scores.

How to Fix: Create real social media accounts for Epic Games Hub on at least 2 platforms (Instagram and Facebook recommended). Post consistently for 4–6 weeks before reapplying. Update all footer links to point to the real profile URLs.

3. High Priority Issues

3.1 About Us Page Lacks Real Identity

HIGH

Issue: The About Us page is entirely generic. It contains no founder names, no team member information, no founding story, no country or city of operation, and no real email address in the main body. It reads like a template. Google's quality raters are instructed to flag sites where 'who is responsible for this content' cannot be determined.

How to Fix: Rewrite the About Us page to include: your name (or team names), when and why you started the site, your location (city/country), a genuine email address, and a personal statement about your gaming passion. A photo or avatar of the team/founder adds significant credibility.

3.2 Privacy Policy Does Not Mention AdSense / Third-Party Ads

HIGH

Issue: Your Privacy Policy states 'We do not collect any personal information from users directly.' However, once AdSense is approved, Google will place cookies and track users for ad personalisation. Your current policy does not cover this, which is an immediate compliance violation once ads are live.

How to Fix: Update the Privacy Policy to include: (a) a section about advertising partners and their use of cookies, (b) mention of Google AdSense specifically, (c) a link to Google's privacy policy and the DoubleClick opt-out tool. Consider using Google's Privacy Policy generator for AdSense publishers.

3.3 No Game Distribution Publisher Credentials Displayed

HIGH

Issue: Games such as Subway Surfers, Candy Crush, and 8 Ball Pool are heavily trademarked titles. While Game Distribution provides a licensing platform, there is no visible indication on your site that you are an authorised publisher. Google may flag the use of these brand names as a potential intellectual property concern.

How to Fix: Add a visible licensing statement in your footer: 'Games provided under licence via Game Distribution. All trademarks belong to their respective owners.' Also add your Game Distribution Publisher ID to the About or Developers page to prove your authorised status.

3.4 Contact Page Has No Direct Email Address

HIGH

Issue: The Contact page only shows a form. There is no direct email address, phone number, or physical address visible to the user. Google's guidelines state that legitimate sites should have easily findable contact information. A form-only page is considered insufficient.

How to Fix: Add a direct email address (e.g. contact@epicgameshub.com) visibly on the Contact page in addition to the form. Optionally add a country/city of operation. This matches what is already in your Privacy Policy and adds consistency.

4. Medium Priority Issues

4.1 No User Interaction Features

MEDIUM

Issue: The site has no comments, ratings, reviews, or any form of user-generated content. Google views user engagement as a positive quality signal. Sites where users can interact tend to rank higher and pass AdSense review more easily.

How to Fix: Add a simple star rating widget to each game page. Consider adding a comments section using a free tool like Disqus. Even a 'Did you enjoy this game? Thumbs up / Thumbs down' button adds meaningful engagement signals.

4.2 Cookie Policy Does Not Cover Third-Party Ad Cookies

MEDIUM

Issue: Similar to the Privacy Policy gap, the Cookie Policy needs to be updated to reflect ad-serving cookies once AdSense is live. Running ads without disclosing ad cookies violates GDPR (which you have a page for) and AdSense policy.

How to Fix: Update the Cookie Policy to add a 'Advertising Cookies' category explaining that Google AdSense may place cookies to serve personalised ads. Include the opt-out link. Also implement a cookie consent banner (CMP) before enabling ads.

4.3 Missing Sitemap and Robots.txt

MEDIUM

Issue: A sitemap.xml and robots.txt file help Google's crawlers discover and index all your pages efficiently. Without these, some pages (especially new game pages and the blog you will create) may not be indexed quickly.

How to Fix: Create a sitemap.xml listing all your game pages, legal pages, and blog posts. Submit it to Google Search Console. Create a basic robots.txt file that allows all crawlers. Both files should live at the root of your domain.

5. What Your Site Does Well

The following elements are already in place and meet Google's requirements. These do not need to be changed — maintain and build on them.

Item	Status	Notes
Privacy Policy page	PASS	Exists at /privacy.html — needs updating for ads
Terms of Service page	PASS	Exists and covers key user terms
Cookie Policy page	PASS	Exists — needs ad-cookie section added
DMCA page	PASS	Good for copyright protection on a gaming site
GDPR page	PASS	Shows awareness of European compliance
Disclaimer page	PASS	Covers virtual content / no real-money claims
Contact page	PASS	Exists — needs direct email added
About Us page	PARTIAL	Exists but lacks real identity information
FAQ page	PASS	Exists — a useful trust-building page
Mobile responsive design	PASS	Site adapts well to all screen sizes
Clear category navigation	PASS	19 game categories — easy to browse
Game page structure	PASS	Consistent layout across all game pages
Meta descriptions	PASS	Each page has a unique meta description
Page titles	PASS	Descriptive and unique per page
HTTPS / SSL	PASS	Site is served over secure HTTPS
No auto-play audio/video ads	PASS	No disruptive media on load

6. Step-by-Step Action Plan

Follow this plan in order. Complete Phase 1 before moving to Phase 2. Do not request an AdSense review until Phase 3 is complete.

Phase 1 – Immediate Fixes (Week 1–2)

1	Fix all broken social media links Create Facebook and Instagram pages for Epic Games Hub. Post at least 5 pieces of content on each before you request review.
2	Update About Us page Add your real name, founding story, country, and a genuine photo or avatar. Make it personal and human.
3	Add direct email to Contact page Display contact@epicgameshub.com visibly on the contact page, not just inside a form.
4	Add Game Distribution licensing statement Add to footer: 'Games licensed via Game Distribution. All trademarks belong to their respective owners.' Add your Publisher ID on the Developers page.
5	Update Privacy Policy for ads Add sections covering advertising cookies, Google AdSense data use, and user opt-out options.
6	Update Cookie Policy for ads Add an 'Advertising Cookies' section. Ensure your cookie banner asks for consent before ads load.

Phase 2 – Content Creation (Week 2–6)

1	Expand all existing game pages Write 500–800 words of original content for every game page. Include: overview, how to play, tips, pros/cons, and your own rating. Target your top 20 most-played games first.
2	Start a gaming blog Publish 15–20 blog articles of 800–1000 words each. Topics: Top 10 games for beginners, How to score higher in Subway Surfers, Best puzzle games to play in 2026, etc.
3	Add user engagement features Add a star rating system and Disqus comments to each game page. This creates user signals that Google values.
4	Create sitemap.xml List all game pages, legal pages, and blog posts. Submit to Google Search Console.
5	Create robots.txt Allow all crawlers. Place at epicgameshub.com/robots.txt .

Phase 3 – Pre-Review Checklist (Week 6–8)

1	Verify social media accounts are active At least 4–6 weeks of consistent posting on 2+ platforms.
2	Check all pages for broken links Use a free tool like Broken Link Checker to scan your entire site.
3	Test site on mobile and desktop Ensure all game pages, blog posts, and legal pages display correctly on all devices.
4	Submit sitemap to Google Search Console Check that your new blog posts and expanded game pages are indexed by Google.
5	Confirm cookie consent banner is working The CMP banner must appear and record user consent before any ad cookies are set.
6	Request AdSense Review Check the 'I confirm I have fixed the issues' checkbox and click Request Review. Only do this after all above steps are complete.

7. Broader Things to Reconsider

Beyond fixing the current rejection, here are strategic points to think about before you invest heavily in AdSense monetisation for this type of site.

- **Business Model: Is AdSense the Best Fit?**

AdSense revenue on a gaming site depends on high page views and strong CPM rates. Gaming sites typically earn \$0.50–\$2.00 CPM (per 1000 views). To earn meaningful revenue, you need tens of thousands of monthly visitors. Consider whether affiliate programs (e.g. linking to game app stores) or Game Distribution's own ad revenue share might be more suitable alongside or instead of AdSense.

- **Site Name: 'Epic Games Hub' Brand Risk**

Your site name is very close to 'Epic Games' — the company behind Fortnite and the Epic Games Store, a billion-dollar brand with active trademarks. While not certain, this could attract a cease-and-desist or complicate your AdSense application if Google flags it as brand confusion. Consider consulting a legal professional or rebranding to something clearly distinct.

- **Competing With Your Own Content: iframes vs. Original Games**

All your games are embedded iframes from Game Distribution. This means you are essentially a reseller of their content. Google can always decide that the 'original' source (the game developer's official site) has more value than your aggregate page. Consider commissioning simple original HTML5 games or partnering with indie developers to host exclusive titles — this would make your content genuinely unique.

- **Site Age and Domain Authority**

AdSense approval is significantly easier on sites that are 6+ months old with consistent traffic growth. If your domain is very new (under 3 months), even fixing all the above issues may not result in immediate approval. Focus on building organic SEO traffic through your blog posts before reapplying.

- **Children's Audience and COPPA Compliance**

Your site hosts games like Candy Crush and Subway Surfers — games highly popular with children under 13. Your Privacy Policy states you do not intentionally collect data from under-13s, but the content clearly attracts them. If a significant portion of your audience is children, you must comply with COPPA (USA) and GDPR-K (Europe), which restricts personalised advertising to minors. AdSense has strict policies around this. Consider adding an age gate or marking your site as 'child-directed' in AdSense settings, which disables personalised ads.

8. Realistic Timeline to Approval

Week	Action	Goal
Week 1–2	Fix broken links, update About Us, update Privacy/Cookie Policy, reduce copyright concerns	Reduce copyright concerns
Week 2–4	Write 500–800 words for top 20 game pages	Improve content depth
Week 3–6	Publish 15–20 blog articles (800–1000 words each)	Build original content library
Week 4–6	Create social media accounts, post regularly	Build trust signals
Week 5–6	Add ratings/comments, create sitemap, submit to Search Console	Improve UX and indexing
Week 7–8	Final audit: test everything, check indexing, verify CMP	Pre-review verification
Week 8+	Request AdSense Review	Approval

Note: Google's review after submission typically takes 1–4 weeks. If rejected again, you must wait before resubmitting. The timeline above is a minimum — taking more time to build quality content improves your chances significantly.

9. Quick Reference Checklist

Use this checklist before submitting your AdSense review request.

CRITICAL – Must Have

- Each game page has 500+ words of original written content
- Blog section exists with 15+ articles of 800+ words each
- Social media accounts are active (Facebook + Instagram minimum)
- Footer social links point to real profile pages
- About Us page includes real name/team, location, and founding story
- Game Distribution licensing statement is in the footer

HIGH – Should Have

- Privacy Policy includes Google AdSense and advertising cookie disclosure
- Cookie Policy includes advertising cookies section
- Cookie consent banner (CMP) is active and working
- Contact page shows direct email address (not just a form)
- Developers page shows Game Distribution Publisher ID
- sitemap.xml created and submitted to Google Search Console
- robots.txt file exists at domain root

MEDIUM – Good to Have

- Star rating widget on each game page
- Comments section (Disqus or similar) on game pages
- Google Search Console verified and monitoring
- Site tested on iOS and Android mobile browsers
- All internal links checked for broken URLs
- Site speed tested (aim for under 3 seconds load time)

This report was generated specifically for epicgameshub.com based on a live site audit conducted in June 2026. All recommendations are based on current Google AdSense Program Policies and Webmaster Quality Guidelines. Policies may change — always verify at support.google.com/adsense before requesting review.
